02

Leaded eyewear is designed for personnel who are present during medical procedures involving fluoroscopy and other forms of x-ray imaging. As awareness of occupational eye exposure and lens-related radiation risks has increased, leaded glasses have become an essential part of radiation protection in many procedural settings.

EYEWEAR

Handcrafted eyewear made by
licensed opticians

Protech Medical is one of the largest U.S.-based manufacturers of leaded eyewear in the world. Our licensed opticians handcraft each frame, with every pair carefully assembled and inspected for quality, fit, and performance. From leaded glasses, goggles, and fitovers to face shields and prescription radiation eyewear, Protech offers a wide range of affordable and premium options to meet the needs of today's healthcare professionals.

To meet the diverse needs of medical professionals, Protech offers a broad selection of frame styles, brands, and configurations designed to support different fit preferences, clinical environments, and protection needs.

WHY USE LEADED EYEWEAR?

Published research has suggested that the lens of **the eye may be more sensitive to ionizing radiation than previously believed**, with cataract risk potentially associated with lower levels of exposure than once assumed. [2][3]

Studies have also indicated that interventional and fluoroscopy-based work may increase the likelihood of lens damage over time. [4] Protective measures such as leaded eyewear, patient-supported protective drapes, and suspended ceiling shields have been shown to help reduce lens dose. In fluoroscopy settings, **leaded eyewear has been reported to reduce lens exposure significantly**, with some studies showing reductions by a factor of two to three or more. [5]

ANNUAL DOSE LIMITS

In 2012, the International Commission on Radiological Protection (ICRP) reduced its recommended occupational eye lens dose limit from 150 mSv per year to **20 mSv per year averaged over 5 years**, with no single year exceeding 50 mSv. The European Union subsequently incorporated these updated recommendations into its basic safety standards.

THE BREAKDOWN

FRAME SIZING

Example frame size: Centrist (55-17-140)*

In the above frame size, the 55 corresponds to "A" (Lens size), the 17 represents "B" (Bridge Size), and 140 is the length of "C" (Temple size). *"B" Size not specified. NOTE: Not all frame sizes are representative of how a frame will fit. It is always best practice to try a frame on when possible. For instance, the Nike Brazen is a "large frame" based on its frame size, yet it fits a majority of men and women's faces.

A

Eye Size

Horizontally measured from outermost edges of the lens. Approx 40-62mm.

B

Bridge Size

Measurement of the distance between two lenses usually measured at the nose bridge.

C

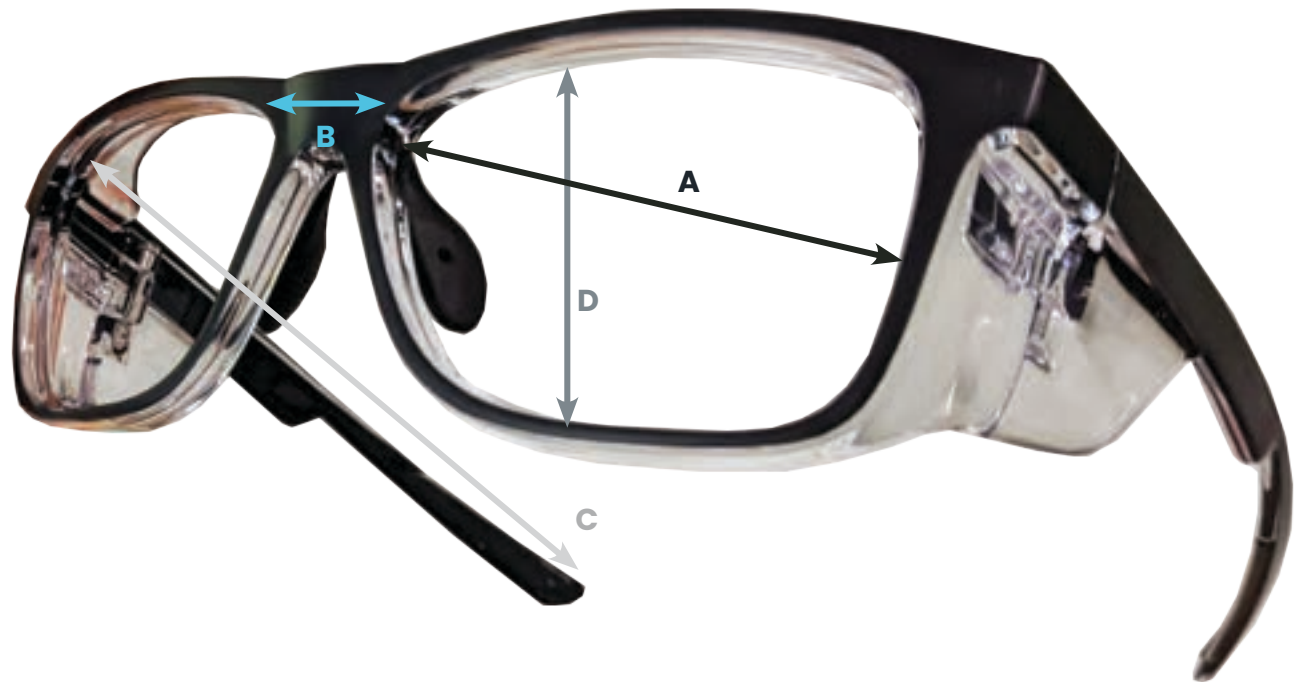

Temple Size

Measurement of the temple arms that extend from the front of the frame over your ears. The length of your frame's temples is important to ensure stability and comfort.

D

"B" Measurement

Measurement of the height of the lenses. *For Bifocal and Progressive lenses, a B measurement of at least 25mm is recommended.

WHAT TO LOOK FOR

YOUR PERFECT FRAME

Temples

The length and curvature of your frame's temples is important to ensure stability and comfort.

Temple Grips

Available with several eyewear styles, temple grips can provide comfort and stability for the wearer.

Lead Glass

Lead glass lenses provide the main protection against x-ray. The lenses greatly influence weight so it is important to balance maximizing coverage with the need for comfort.

Side Shields

Side shields are essential for lateral protection. Some frames come standard with side shields and others are optional

Nose Bridge

A well-designed nose bridge is necessary for a proper fit. Flat nose bridges enable drilling for the addition of loupes.

Ventilated Nose Grips

Ventilated nose pads keep the frame comfortably gripped on your face and can reduce fogging.

EYEWEAR ADDONS

Lateral Side Shields

Many of our frames come with side shields for maximum protection. There are three types of side shields – glass lenses, side shield attachments (SSA) and vinyl strips added to existing side shield areas (SS). **For all side shield types, the standard protection is 0.50mm Pb.** Some frames are able to accommodate a 0.75mm Pb glass, such as the 53 Wrap shown here (Fig A.).

Fig A - Side shield example - 0.75mm Pb Glass

Side shield Attachment (SSA) example

Side shield (SS) example - 0.50mm Pb strip

AR Coating

An anti-reflective coating eliminates the reflection produced by light on eyewear lenses. **Once an AR coat has been applied, 99.5% of available light will be able to pass through your lenses (compared to 85%) which enhances visual acuity and reduces eye strain.** During procedures, an anti-reflective coating is particularly important to reduce the reflections and light disturbances caused by operational and lighting equipment.

ACCESSORIES

All eyewear purchases come with a hard case, pouch, headstrap and cleaning cloth.
